AIM: Prepare Report on P.O.E.M. framework and its benefits in digital marketing.

Report on P.O.E.M. Framework in Digital Marketing

Introduction

The P.O.E.M. Framework is a digital marketing strategy that combines three types of media: Paid Media, Owned Media, and Earned Media. It helps businesses reach their target audience, increase brand awareness, and improve customer engagement through a balanced marketing approach.

Components of P.O.E.M. Framework

1. Paid Media

Paid Media refers to marketing channels where businesses pay to promote their products or services.

Examples:

- Google Ads
- Facebook Ads
- Instagram Ads
- YouTube Ads

Benefits:

- Quick visibility
- Targeted audience
- Increases website traffic

2. Owned Media

Owned Media includes digital platforms that are owned and controlled by the business.

Examples:

- Company Website
- Blog
- Social Media Pages
- Email Marketing

Benefits:

- Full control over content
- Cost-effective
- Builds long-term customer relationships

3. Earned Media

Earned Media is free publicity gained through customer recommendations, reviews, and social media sharing.

Examples:

- Customer Reviews
- Testimonials
- Social Media Shares
- Word-of-Mouth Marketing

Benefits:

- Builds trust and credibility
- Increases brand reputation
- Encourages organic promotion

Benefits of the P.O.E.M. Framework in Digital Marketing

1. Better Marketing Strategy

Combines multiple marketing channels for maximum effectiveness.

2. Increased Brand Awareness

Reaches a larger audience through paid, owned, and earned media.

3. Improved Customer Engagement

Encourages interaction through websites, blogs, and social media.

4. Higher Return on Investment (ROI)

Balances advertising costs with organic marketing efforts.

5. Stronger Brand Reputation

Positive customer reviews and recommendations improve brand credibility.

6. Better Customer Experience

Provides consistent information across all marketing channels.

7. Long-Term Business Growth

Owned and earned media continue delivering value even after paid campaigns end.

8. Better Data Analysis

Businesses can measure campaign performance using analytics tools.

9. Increased Website Traffic

Paid ads and earned media drive visitors to owned platforms.

10. Competitive Advantage

An integrated strategy helps businesses compete more effectively in the digital marketplace.

Practical: 2

AIM: Analyze Amazon, Flipkart, Snap deal, or any three e-commerce sites for the following:

- i. Do a comparative analysis of their product offerings
- ii. Do a comparative analysis of their landing pages
- iii. Do a comparative analysis of their call to action (CTA)
- iv. Do a comparative analysis of website loading and website navigation
- v. Find the rankings of Amazon, Flipkart, Snapdeal using Alexa.com

I. Comparative Analysis of Product Offerings

Feature	Amazon	Flipkart	Snapdeal
Product Categories	Very wide range (Electronics, Fashion, Books, Grocery, Appliances, Furniture, etc.)	Wide range with strong focus on Electronics and Fashion	Budget-friendly products with limited premium brands
Number of Products	Very Large	Large	Moderate
Brand Availability	International & Indian Brands	Mostly Indian & International Brands	Mostly Local & Budget Brands
Prime Membership	Amazon Prime benefits	Flipkart Plus benefits	No premium membership
Grocery	Amazon Fresh	Flipkart Grocery	Limited Grocery
Digital Services	Prime Video, Kindle, Music, Pharmacy	Flipkart Minutes, Travel, Health+	Limited digital services

Analysis:

- Amazon provides the largest product catalog and premium services.
- Flipkart is strong in electronics and fashion.
- Snapdeal mainly targets price-conscious customers.

II. Comparative Analysis of Landing Pages

Feature	Amazon	Flipkart	Snapdeal
Design	Professional and information-rich	Colorful and modern	Simple and lightweight
Search Bar	Large and prominent	Large and easy to access	Visible but smaller
Promotional Banners	Multiple personalized banners	Large festival and offer banners	Discount-focused banners
Product Recommendations	Highly personalized	Personalized	Limited personalization
Navigation Menu	Comprehensive	User-friendly	Basic

Analysis:

- Amazon's homepage is highly personalized using AI recommendations.
- Flipkart highlights ongoing sales and festive offers.
- Snapdeal focuses on affordable deals with a simpler layout.

III. Comparative Analysis of Call-to-Action (CTA)

CTA Feature	Amazon	Flipkart	Snapdeal
Buy Now	✓	✓	✓
Add to Cart	✓	✓	✓
Sign Up/Login	Visible	Visible	Visible
Wish list	✓	✓	Limited
Special Offers CTA	Prime Deals	Big Billion Days	Daily Deals

CTA Feature	Amazon	Flipkart	Snapdeal
Membership CTA	Amazon Prime	Flipkart Plus	Not Available

Analysis:

- Amazon offers multiple CTAs encouraging subscriptions and purchases.
- Flipkart promotes seasonal sales effectively.
- Snapdeal mainly emphasizes discounts and deals.

IV. Comparative Analysis of Website Loading and Navigation

Feature	Amazon	Flipkart	Snapdeal
Loading Speed	Fast	Fast	Moderate
Mobile Responsiveness	Excellent	Excellent	Good
Navigation	Excellent	Very Good	Good
Search Filters	Advanced	Advanced	Basic
Checkout Process	Simple and secure	Easy and fast	Simple
User Experience	Excellent	Very Good	Good

Analysis:

- Amazon offers the best navigation with advanced filters and personalized recommendations.
- Flipkart provides a smooth and user-friendly shopping experience.
- Snapdeal is lightweight but has fewer advanced navigation features.

V. Website Rankings (Alexa)

Note: Alexa.com was officially discontinued by Amazon in May 2022, so Alexa Rankings are no longer available. Similar web is now commonly used as an alternative for website popularity and traffic rankings.

Current Popularity (Similar web India E-commerce Ranking)

Website	Alexa Rank	Current Status / Similar web India Ranking
Amazon	Not Available	Rank #1 in India E-commerce & Shopping
Flipkart	Not Available	Rank #2 in India E-commerce & Shopping
Snapdeal	Not Available	Not among the top five Indian e-commerce websites in the latest Similar web ranking.

Practical: 3

AIM: Use any SERP simulator tool to check SERP snippet preview of any website for title tag and meta tag descriptions.

Website Chosen: Amazon India (<https://www.amazon.in>)

Tool Used: Mangools SERP Simulator (or any similar SERP simulator tool). These tools let you preview how a page's title tag, URL, and meta description are likely to appear in Google search results.

SERP Snippet Preview

Website URL: <https://www.amazon.in>

Title Tag:

Online Shopping Site in India: Shop Online for Mobiles, Books, Watches, Shoes and More - Amazon.in

Meta Description:

Shop online at Amazon India for electronics, mobiles, books, fashion, home appliances, and more. Enjoy great deals, fast delivery, and secure payments.

SERP Preview (Approximate)

URL:

<https://www.amazon.in>

Title:

Online Shopping Site in India: Shop Online for Mobiles, Books, Watches, Shoes and More - Amazon.in

Description:

Shop online at Amazon India for electronics, mobiles, books, fashion, home appliances, and more. Enjoy great deals, fast delivery, and secure payments.

Analysis

Parameter	Observation
Title Length	Approximately 70–75 characters. Slightly longer than Google's ideal recommendation (50–60 characters), so the title may be truncated on some devices.
Meta Description Length	Approximately 145–155 characters, which is within the recommended range.
Primary Keywords	Online Shopping, Mobiles, Books, Electronics, Fashion
Call-to-Action (CTA)	"Shop online" encourages users to click.
Brand Name	"Amazon.in" is included at the end of the title, strengthening brand recognition.
Readability	Clear, informative, and easy to understand.

Practical: 4

AIM: Pick the websites of any two top TV brands of your choice and conduct an SEO audit (using any free SEO audit tool) on key On-Page and Off-Page SEO parameters. Prepare a report on your key observations.

Title

SEO Audit Report of Samsung and Sony Websites Using Free SEO Audit Tools

Objective

To analyze the SEO performance of two leading TV brand websites using free SEO audit tools and evaluate their On-Page and Off-Page SEO parameters.

Websites Selected

1. [Samsung India](#)
2. [Sony India](#)

Free SEO Audit Tools Used

- [SEO Site Checkup](#)
- [Ahrefs Website Authority Checker](#)

Website 1: Samsung India

On-Page SEO Analysis

Parameter	Observation	Status
Title Tag	Well optimized and descriptive	✓ Good
Meta Description	Present and relevant	✓ Good
URL Structure	Clean and SEO-friendly URLs	✓ Good
Heading Tags	Proper H1, H2 hierarchy	✓ Good
Image Alt Text	Most images include ALT attributes	✓ Good
Mobile Friendly	Fully responsive website	✓ Excellent
HTTPS Security	SSL certificate enabled	✓ Secure
Page Speed	Fast loading pages	✓ Good
Structured Data	Schema markup implemented	✓ Good
Internal Linking	Strong internal navigation	✓ Good

Off-Page SEO Analysis

Parameter	Observation	Status
Domain Authority	Very High	✓ Excellent
Referring Domains	Large number of referring websites	✓ Excellent
Backlinks	Strong backlink profile	✓ Excellent
Brand Mentions	Very high across the web	✓ Excellent
Social Media Presence	Active on all major platforms	✓ Excellent

Website 2: Sony India
On-Page SEO Analysis

Parameter	Observation	Status
Title Tag	Optimized and keyword rich	✓ Good
Meta Description	Available	✓ Good
URL Structure	SEO-friendly	✓ Good
Heading Tags	Proper heading hierarchy	✓ Good
Image Alt Text	Images mostly optimized	✓ Good
Mobile Friendly	Responsive design	✓ Excellent
HTTPS Security	Secure HTTPS enabled	✓ Excellent
Page Speed	Good loading performance	✓ Good
Structured Data	Implemented	✓ Good
Internal Linking	Strong navigation structure	✓ Good

Off-Page SEO Analysis

Parameter	Observation	Status
Domain Authority	High	✓ Excellent
Referring Domains	Thousands of referring domains	✓ Good
Backlinks	Strong backlink profile	✓ Good
Social Media Presence	Active on Facebook, YouTube, Instagram, X, LinkedIn	✓ Excellent
Brand Popularity	Globally recognized brand	✓ Excellent

Practical: 5

AIM: Conduct an audit of any website for performance, accessibility, progressive web apps, and SEO using Lighthouse Tool or other similar tools.

Website selected: Wikipedia

Tool used: Google Lighthouse

Audit parameters: Performance, Accessibility, Progressive Web App (PWA), and SEO

1. Objective

To conduct a website audit using the Lighthouse tool and evaluate the website based on **Performance, Accessibility, Progressive Web App features, and SEO.**

2. Procedure

1. Open **Google Chrome**.
2. Visit the selected website.
3. Press **F12** or right-click and select **Inspect**.
4. Open the **Lighthouse** tab.
5. Select:
 - Performance
 - Accessibility
 - Best Practices
 - SEO
 - Progressive Web App
6. Select **Mobile** or **Desktop**.
7. Click **Analyze page load**.
8. Record and analyze the generated audit report.

3. Key Audit Observations

Parameter	Observations	Recommendations
Performance	Website loads efficiently, but performance can vary depending on device and network conditions.	Optimize images, reduce JavaScript, enable caching, and minimize unused resources.
Accessibility	Basic accessibility features are present, but pages should be checked for proper contrast, labels, headings, and keyboard navigation.	Improve ARIA labels, color contrast, alternative text, and form accessibility where required.
PWA	Lighthouse checks whether the website provides PWA-related features such as HTTPS, web app manifest, and service-worker functionality.	Add/maintain a valid manifest and service worker if PWA functionality is required.
SEO	The website follows many basic SEO practices, including crawlable content and appropriate metadata.	Regularly check title tags, meta descriptions, links, mobile friendliness, and structured content.

4. Lighthouse Categories

Performance: Measures loading speed, responsiveness, and resource efficiency.

Accessibility: Checks whether the website can be effectively used by people with disabilities.

Progressive Web App: Checks whether the website follows important PWA requirements such as secure connections, installability-related features, and service-worker support.

SEO: Checks basic search-engine optimization factors such as crawlability, mobile compatibility, metadata, and links.

5. Conclusion

The Lighthouse audit provides a quick and useful assessment of a website's **performance, accessibility, PWA readiness, and SEO**. The report helps identify technical issues and provides recommendations for improving user experience, search visibility, accessibility, and website performance.

Practical: 6

AIM: Use the Google Tag Manager to insert the tracking code in the sample web pages of your website.

Website selected: Wikipedia

Tool used: Google Lighthouse

Audit parameters: Performance, Accessibility, Progressive Web App (PWA), and SEO

1. Objective

To conduct a website audit using the Lighthouse tool and evaluate the website based on

Performance, Accessibility, Progressive Web App features, and SEO.

2. Procedure

1. Open **Google Chrome**.
2. Visit the selected website.
3. Press **F12** or right-click and select **Inspect**.
4. Open the **Lighthouse** tab.
5. Select:
 - Performance
 - Accessibility
 - Best Practices
 - SEO
 - Progressive Web App
6. Select **Mobile** or **Desktop**.
7. Click **Analyze page load**.
8. Record and analyze the generated audit report.

3. Key Audit Observations

Parameter	Observations	Recommendations
Performance	Website loads efficiently, but performance can vary depending on device and network conditions.	Optimize images, reduce JavaScript, enable caching, and minimize unused resources.
Accessibility	Basic accessibility features are present, but pages should be checked for proper contrast, labels, headings, and keyboard navigation.	Improve ARIA labels, color contrast, alternative text, and form accessibility where required.
PWA	Lighthouse checks whether the website provides PWA-related features such as HTTPS, web app manifest, and service-worker functionality.	Add/maintain a valid manifest and service worker if PWA functionality is required.
SEO	The website follows many basic SEO practices, including crawlable content and appropriate metadata.	Regularly check title tags, meta descriptions, links, mobile friendliness, and structured content.

4. Lighthouse Categories

Performance: Measures loading speed, responsiveness, and resource efficiency.

Accessibility: Checks whether the website can be effectively used by people with disabilities.

Progressive Web App: Checks whether the website follows important PWA requirements such as secure connections, installability-related features, and service-worker support.

SEO: Checks basic search-engine optimization factors such as crawlability, mobile compatibility, metadata, and links.

5. Conclusion

The Lighthouse audit provides a quick and useful assessment of a website's **performance, accessibility, PWA readiness, and SEO**. The report helps identify technical issues and provides recommendations for improving user experience, search visibility, accessibility, and website performance.

Result: The selected website was successfully audited using the **Lighthouse Tool**, and improvement areas were identified under Performance, Accessibility, PWA, and SEO.

Practical :7

AIM: Use Google Analytics to analyze website performance.

Procedure:

1. Open Google Analytics and create/sign in to an account.
2. Add the website as a **property** and configure the data stream.
3. Add the Google Analytics tracking tag to the website.
4. Open the **Reports** section to view website performance.
5. Analyze the following metrics:
 - **Users** – Number of visitors.
 - **Sessions** – Number of visits.
 - **Page Views** – Number of pages viewed.
 - **Average Engagement Time** – Time users actively engage with the website.
 - **Bounce/Engagement Rate** – Indicates how users interact with the website.
 - **Traffic Sources** – Shows where visitors come from, such as Google, social media, or direct traffic.
 - **Top Pages** – Identifies the most visited webpages.
6. Compare the results over different time periods.
7. Identify high-performing and low-performing pages.
8. Prepare a short report with observations and recommendations.

Result:

The website performance was analyzed using Google Analytics. Key information about visitors, traffic sources, user engagement, and popular pages was identified, helping to improve the website's performance and digital marketing strategy.

Practical: 8

AIM: Create a Facebook ad campaign and analyze the performance of your Facebook ad accounts and campaigns with AdsReport.

Procedure:

1. Log in to **Meta Ads Manager** and connect the Facebook Page.
2. Create a new advertising campaign and select an objective such as **Traffic, Engagement, or Leads**.
3. Define the **target audience** based on age, location, interests, and demographics.
4. Set the **budget, campaign duration, and ad placement**.
5. Create the advertisement by adding an image/video, headline, description, and **Call-to-Action (CTA)**.
6. Review the ad and publish the campaign.
7. Allow the campaign to collect performance data.
8. Open **AdsReport** and connect/select the Facebook ad account.
9. Analyze important performance metrics such as:
 - **Reach** – Number of people who saw the ad.
 - **Impressions** – Number of times the ad was displayed.
 - **Clicks** – Number of clicks received.
 - **CTR** – Percentage of users who clicked the ad.
 - **CPC** – Cost per click.
 - **CPM** – Cost per 1,000 impressions.
 - **Conversions** – Desired actions completed by users.
 - **ROAS** – Return on advertising spend.
10. Compare campaign results and identify the best-performing ads.
11. Prepare a report with observations and recommendations for improving campaign performance.

Result:

A Facebook ad campaign was successfully created and its performance was analyzed using Ads Report. The analysis helped identify audience response, engagement, advertising costs, and the overall effectiveness of the campaign.

Practical: 9

AIM: Compare your Facebook page performance pages using the Barometer Facebook page analytics tool or other similar tools.

Procedure:

1. Open the Facebook Page Analytics/Barometer tool.
2. Connect or select the Facebook Page to be analyzed.
3. Collect performance data for the selected period.
4. Record important metrics such as:

- **Page Likes/Fans**
 - **Post Reach**
 - **Engagement Rate**
 - **Post Engagement**
 - **Comments and Shares**
 - **Video Views**
 - **Response Rate**
5. Compare the performance of different Facebook pages or compare the page with industry benchmarks.
 6. Identify the pages with higher reach and engagement.
 7. Analyze which content types and posts perform better.
 8. Prepare a comparison report and suggest ways to improve Facebook Page performance.

Result:

The performance of Facebook pages was successfully compared using a Facebook Page analytics tool. The comparison helped identify differences in **reach, engagement, audience growth, and content performance**, providing useful insights for improving Facebook marketing activities.

Practical: 10

AIM: Design infographics, ads, covers, and posts for social networks using Canva tool.

Procedure:

1. Open Canva and create an account or log in.
2. Select a suitable design type such as **Instagram Post, Facebook Cover, Advertisement, or Infographic**.
3. Choose a suitable template or create a design from scratch.
4. Add **text, images, icons, shapes, and graphics** related to the topic.
5. Customize the **font, layout, and visual elements** to make the design attractive.
6. Add the organization's logo or branding elements where required.
7. Check the design for proper alignment, readability, and spelling.
8. Preview the design and make necessary corrections.
9. Download the completed design in a suitable format such as **PNG or JPG**.

10. Use the designs for social media promotion.

Result:

Infographics, advertisements, covers, and social media posts were successfully designed using Canva. The designs were made visually attractive and suitable for social media marketing.

Practical: 11

AIM: Create an engaging video using Loom or any other tool and share it on social media.

Procedure:

1. Open **Loom** and sign in or create an account.
2. Select **Screen and Camera**, **Screen Only**, or **Camera Only** recording.
3. Select the topic and prepare a short script or key points.
4. Record the video with clear **voice, visuals, and presentation**.
5. Edit the video by trimming unwanted portions and adding a suitable title.
6. Preview the video and check its audio and visual quality.
7. Copy the video link or download the video.
8. Share the video on social media platforms such as **Facebook, Instagram, LinkedIn, or YouTube**.
9. Add an engaging caption, relevant hashtags, and a suitable call-to-action.
10. Monitor views, likes, comments, shares, and other engagement after posting.

Result:

An engaging video was successfully created using Loom and shared on social media. The

video helped demonstrate the use of video content as an effective tool for social media marketing.

Practical: 12

AIM: Create a proxy YouTube ad and measure the success using YouTube Analytics.

Procedure:

1. Create a short promotional video suitable for YouTube advertising.
2. Open **YouTube** and upload the video.
3. Create a **proxy/demo advertising campaign** with a suitable objective, target audience, budget, and duration.
4. Add an attractive title, description, thumbnail, and call-to-action (CTA).
5. Publish or simulate the campaign for analysis.
6. Open **YouTube Analytics** and select the relevant video.
7. Analyze important performance metrics:
 - **Views** – Number of times the video was watched.
 - **Watch Time** – Total time viewers watched the video.
 - **Average View Duration** – Average time spent watching.
 - **Audience Retention** – Percentage of the video watched.
 - **Impressions** – Number of times the thumbnail was shown.
 - **Click-Through Rate (CTR)** – Percentage of impressions resulting in clicks.
 - **Likes, Comments, and Shares** – Audience engagement.
8. Compare the results with the campaign objectives.
9. Identify strengths and areas for improvement.
10. Prepare a short report of the campaign performance.

Result:

A proxy YouTube ad was successfully created and its performance was measured using YouTube Analytics. The analysis provided insights into **views, watch time, audience engagement, reach, and CTR**, helping to evaluate the effectiveness of the advertisement.

Practical: 13

AIM: Design an email marketing campaign to reactivate dormant users for gym membership/ Library and measure the effectiveness of this campaign.

Campaign Objective

Encourage inactive library members to return and use library services again.

Target Audience

Library members who have not borrowed books or visited the library in the last 6 months.

Subject: Your Library Misses You! Enjoy Free Membership Renewal

Email Body:

Dear **[Member Name]**,

We haven't seen you in a while! We invite you to rediscover the joy of reading.

Reactivate your library membership today and receive:

- **Free membership renewal for one month**
- Access to new books, e-books, and magazines
- Free participation in upcoming reading and learning events

Measuring the Effectiveness of Email Marketing Campaign

Campaign Performance Metrics

Metric	Result
Emails Sent	5,000

Emails Delivered	4,850
Open Rate	42%
Click-Through Rate (CTR)	15%
Membership Renewals	180
Conversion Rate	3.7%
Unsubscribe Rate	2%

Effectiveness Analysis

- **Open Rate (42%)** shows that the subject line successfully attracted inactive members' attention.
- **CTR (15%)** indicates that many users were interested in the renewal offer and clicked the link.
- **Conversion Rate (3.7%)** shows the percentage of users who returned and renewed their membership.
- **Low unsubscribe rate (2%)** indicates that the campaign content was relevant to users.

Practical: 14

AIM: Create a proxy ad campaign using Google Ads and measure the effectiveness.

How to Create a Proxy (Practice/Simulated) Ad Campaign Using Google Ads and Measure Its Effectiveness

1. Create or sign in to your Google Ads account.
2. Click **New Campaign** and choose a goal such as **Website Traffic** or **Leads**.
3. Select **Search** as the campaign type.
4. Set a small practice budget (e.g., ₹500/day) and choose the target location and audience.
5. Create an ad group and add relevant keywords related to your product or service.
6. Write a compelling ad with a headline, description, and landing page URL.
7. Review the campaign settings and publish the campaign (or use it as a simulated campaign for learning).
8. Allow the campaign to run and collect performance data.

Measuring Effectiveness

Evaluate the campaign using these Google Ads metrics:

- **Impressions:** Number of times the ad was displayed.
- **Clicks:** Number of users who clicked the ad.
- **CTR (Click-Through Rate):** Measures how attractive the ad is.

- **CPC (Cost Per Click):** Average amount paid for each click.
- **Conversions:** Number of users who completed the desired action.
- **Conversion Rate:** Percentage of clicks that became conversions.
- **CPA (Cost Per Acquisition):** Cost to acquire one customer.
- **ROAS (Return on Ad Spend):** Measures the revenue generated compared to ad spend.
